

Beta.28 Terminal Experience Verified Against a Real Fix

This deck documents two connected real sessions: one that surfaced a genuine report-integrity bug in the exported task report, and — after the bug was fixed and merged (PR #36) — a fresh verification run proving the fix against a real, live orchestrator with real API calls, real failures, and real recovery.

450f3f5

MAIN @ PR #36 MERGE (FIX)

deepseek-v4-flash

REAL LIVE PROVIDER

2026-07-10

VERIFICATION SESSION DATE

SECTION 1

What the First Demo Attempt Found

Assembling the original evidence package surfaced a real bug: the exported report's `## Final Answer` contained the same planning sentence repeated **12 times**.

```
"Now I have full context. Let me apply all the changes."  
"Now I have full context. Let me apply all the changes."  
"Now I have full context. Let me apply all the changes."  
... (12 occurrences, concatenated from every ReAct turn)
```

ROOT CAUSE Neither the orchestrator's ReAct loop nor the CLI's terminal state reducer tracked turn boundaries — every turn's narration was folded into one ever-growing message.

SECTION 2

The Fix — PR #36

- Orchestrator emits `assistant.turn_started` / `assistant.turn_completed` per ReAct turn, with a stable `turnId` and a `final` flag set only on the turn that produced no further tool calls.
- CLI's state reducer mirrors turn identity explicitly — a delta only appends to its own open turn; an unmatched turn is dropped with a visible notice, never silently merged.
- `selectCanonicalFinalAnswer()` in `output-report.ts` is the single source of truth used by `/output`, `/output full`, `/export`, and the one-shot `--json` path alike.
- Intermediate turns demoted to a bounded `## Intermediate Activity` section; recovery events get `## Recovery Summary`.

MERGED

46 new/updated tests, including a regression fixture built from the real corrupted task. Full validation clean twice. CI green.

SECTION 3

Verification Environment & Facts

OS: Microsoft Windows 11 Home, 10.0.26200

Terminal: Windows Terminal, real ConPTY session

Node: v24.13.1

Orchestrator: run directly from fixed source via `pnpm start`

Provider / model: DeepSeek — deepseek/deepseek-v4-flash (live API)

Workspace: C:\Morrow-Demo\Beta28-Terminal-v3

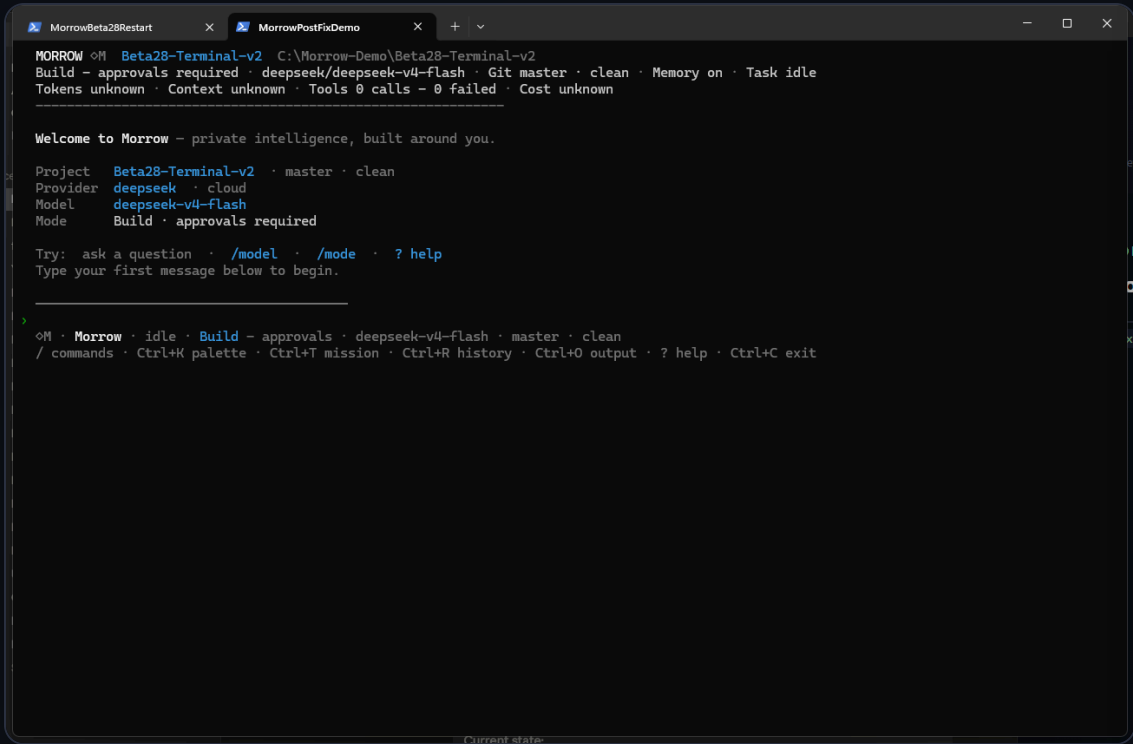

Pass 1 sent: 2026-07-10T06:06:48Z

Pass 2 sent: 2026-07-10T06:08:15Z

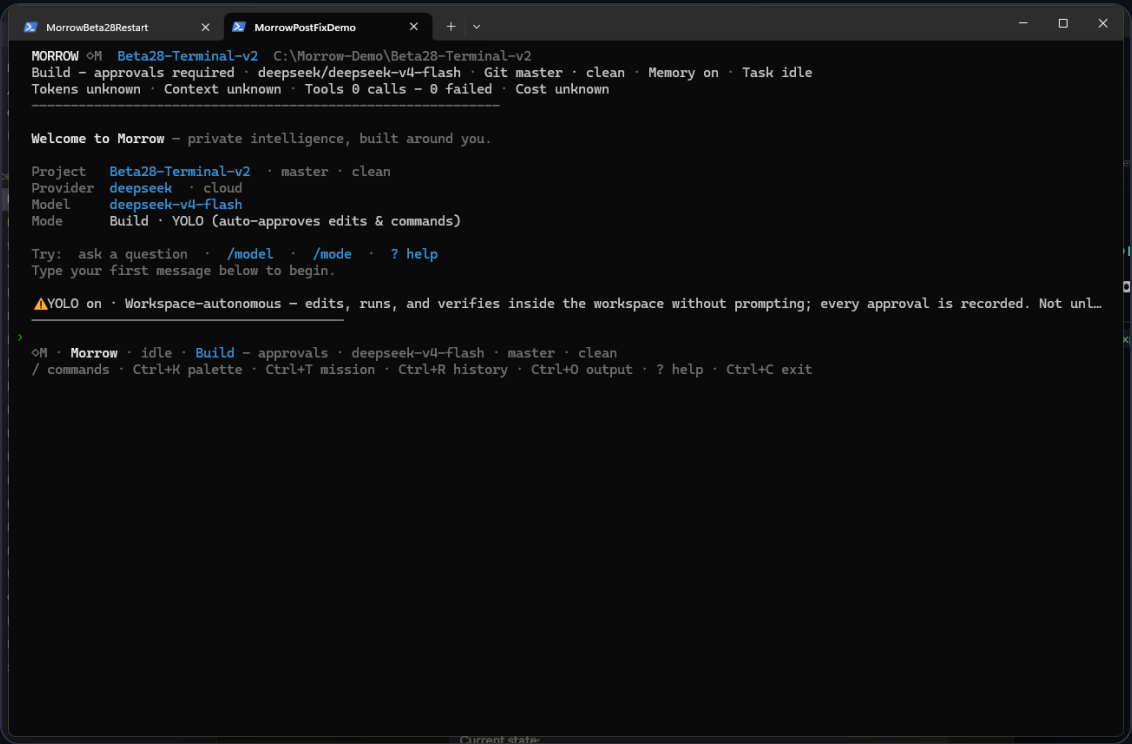

IMPORTANT No `v0.1.0-beta.28` tag exists yet. This documents merged, pre-release code on `main`, not a shipped release.

SECTION 4

Boot & YOLO Mode

01 — Real boot screen, wide layout, project Beta28-Terminal-v3

02 — Real `/yolo on` result and warning banner

SECTION 5

Pass 1 — Live Execution & Completion

Esc closes · output retained in task record

### 'styles.css'
- Added **'[data-theme="light"]'** overrides for all custom properties (bg, surface, border, text, accent, danger, success) plus lighter shadow variants
- Added **'.header-row'** (flex-end layout) and **.theme-toggle** (36px circular button with hover/focus styles)
- Extended transitions on 'html', 'body', '.container', and '.btn' so theme changes animate smoothly

### 'app.js'
- Wraps theme logic inside the same IIFE:
  - 'getStoredTheme()' / 'setStoredTheme()' - read/write 'localStorage' (with 'try/catch' for private browsing)
  - 'getPreferredTheme()' - respects stored value, falls back to 'prefers-color-scheme', defaults to 'dark'
  - 'applyTheme()' - sets 'data-theme' attribute on '<html>'
  - 'toggleTheme()' - switches between 'dark'/'light' and persists
- **Boostraps** theme immediately on load before the counter renders (avoids flash)
- Wires '#theme-toggle' click → 'toggleTheme'

### 'verify.js'
- **6 new checks** for '#theme-toggle' in HTML, 'getElementById("theme-toggle")' in JS, 'localStorage.getItem' / '.setItem', 'setAttribute("data-theme",...)', '[data-theme="light"]' CSS vars, '.theme-toggle' CSS rules
- **Try it** - open 'index.html', click the 🟡 circle in the top-right corner. The theme persists across reloads. Run 'node verify.js' any time to confirm the wiring.

12 — /output failures : clean Recovery Summary

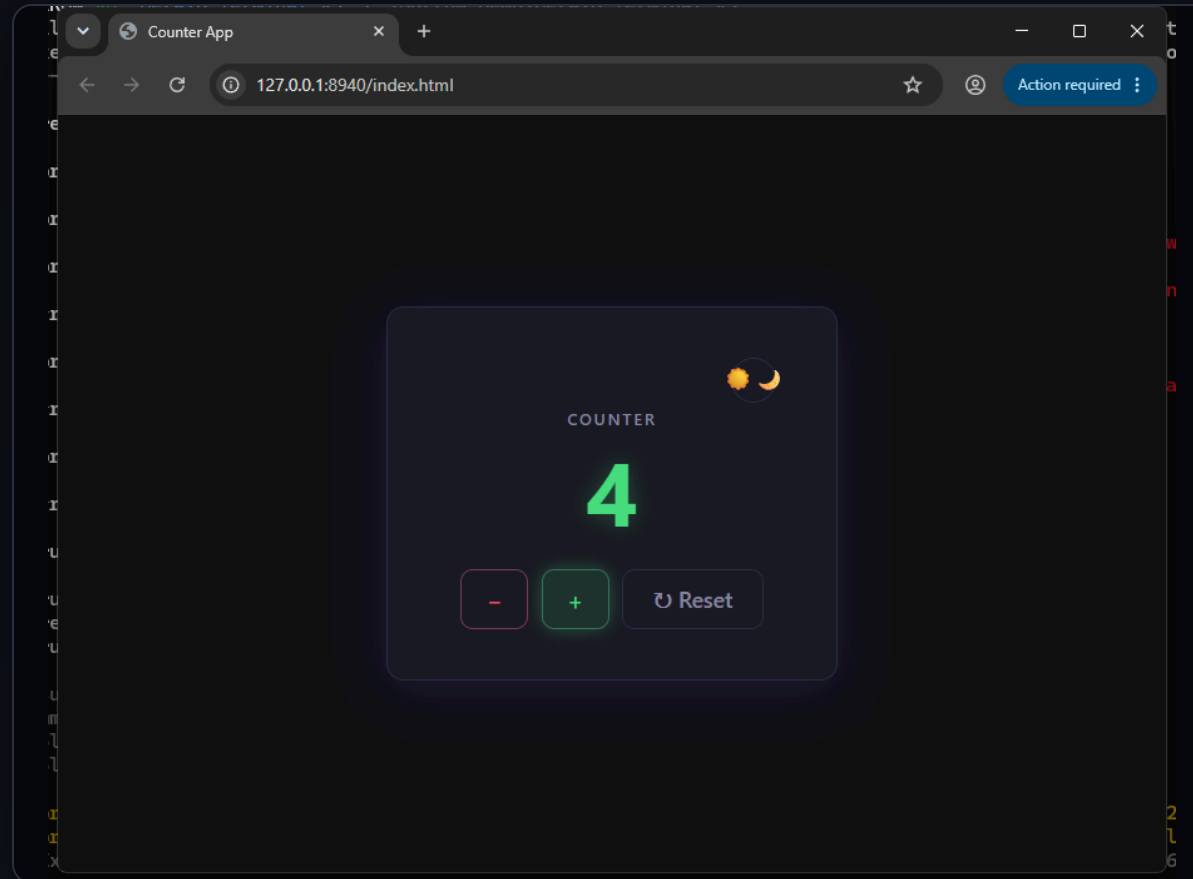

VERIFIED BY DIRECT FILE READ The real exported .md file was read directly (not just screenshotted): **## Final Answer** appears exactly once, the repeated-preamble phrase count is **0**, and a new **## Intermediate Activity** section bounds the 7 non-final turns instead of dumping raw narration.

SECTION 9

Export & Independent Verification

SECTION 10

The Generated App, Verified Working

17 — Real Chrome window, real local HTTP server, counter incremented to 4 via real OS-level clicks

- Increment/decrement/reset all confirmed working via real clicks
- Theme toggle persists across reload via `localStorage` ; counter correctly does not (expected — only theme is persisted)

SECTION 11 & 12

What Was Verified — Honestly

0

REPEATED PREAMBLE OCCURRENCES (WAS 12)

1

FINAL ANSWER SECTION (EXACTLY ONCE)

4/4

REAL FAILURES, ALL RECOVERED

DISCOVERED MID-VERIFICATION

The first re-run attempt against the "fixed" code still showed the bug — traced to a stale, pre-fix orchestrator background service still running on port 4317 from ~36 hours earlier. Stopped it, started a fresh orchestrator from the fixed source, and re-ran clean. Documented rather than hidden.

CONFIRMED REAL

Every screenshot, stat, and transcript excerpt traces to a specific tool call, exported report, or independently-run command listed in `evidence-manifest.json`. No video (OBS access denied, documented). No false beta.28-release claim — `main` is still versioned `0.1.0-beta.27`.
